

TDX TERMINAL

The Conviction Terminal

Product & Feature Map · Technical · Fundamental · ICT / Smart Money Concepts · AI

“Help traders take a trade with confidence.”

One question, answered: Should I take this trade — and how confident should I be?

THE THESIS

The job of this product

TradingView gives you charts. Bloomberg gives you data. **Nobody gives you conviction.** That gap is the entire opportunity. Every feature in this document earns its place by answering one trader question:

Conviction = stacked confluence

A real trader never enters on a single signal. They enter when multiple *independent* reasons line up at the same price and the same time — structure, liquidity, premium/discount, momentum, news, positioning. The central engine of this terminal auto-detects each reason and stacks them into one Conviction Score (0–100). Everything else in this map feeds that score.

What we are / are not

WE ARE	WE ARE NOT
Analysis, data, news, conviction & risk tooling	A broker, exchange, or wallet
A decision-support workstation for crypto & forex	A source of "signals to copy" — it grades, it doesn't advise
Desktop, dense, keyboard-driven (Electron)	A place where money moves — zero execution risk

USE THIS FOR YOUR USER MAP

The trader workflow (8 stages)

Build your user map along this top-down journey. Each stage is a screen / module, and the arrows are how a trader moves through the app from 'what should I watch' to 'what did I learn'.

#	STAGE	WHAT THE TRADER DOES	MODULES THAT SERVE IT
1	BIAS	Form a directional bias	Dashboard, HTF charts, macro / risk-on-off gauge, news, geopolitics
2	WATCH	Narrow to candidates	Screeners, watchlists, currency strength, correlation, alerts firing
3	READ	Read the chart	Charts + ICT/SMC auto-detect: structure, OB, FVG, liquidity, premium/discount
4	CONFLUENCE	Stack the reasons	Confluence Engine collects every aligned factor across TA + fundamentals
5	CONVICTION	Score & grade	Conviction Score 0–100, setup grade A+/A/B/skip
6	PLAN	Build the trade plan	Auto entry / stop / targets / R:R + position size from Toolkit
7	EXECUTE	Place it (elsewhere)	Trader executes at their broker; app logs intended trade + alerts
8	REVIEW	Journal & learn	Trade journal, edge analytics, replay — feeds back into stage 1 bias

The loop is the point: stage 8 feeds stage 1. The trader's own stats sharpen the next bias.

THE TERMINAL AT A GLANCE

Module map

#	MODULE	WHAT IT DELIVERS
01	Dashboard / Command Center	Heatmaps, movers, F&G;, risk-on/off gauge, AI morning brief, custom widget grid
02	Charts	Multi-layout licensed charts, linked crosshair, replay mode, drawing sync
03	Markets / Screeners	Watchlists, multi-filter screener, correlation matrix, relative strength
04	News	RSS + aggregation, dedup/clustering, AI impact scoring, breaking alerts
05	Geopolitics desk	Conflict tracker, central-bank watch, sanctions/commodity shocks, AI translation
06	Live TV	CNBC/Bloomberg/Yahoo multiview + AI live-caption summariser
07	Social / X Pulse	Curated X + StockTwits sentiment trend, influencer signal tracker
08	AI Analyst	Market-aware chat, explain-this-move, chart-vision, natural-language alerts
09	Derivatives desk	Funding, OI, long/short, liquidation heatmap, options flow, max pain
10	On-chain desk	Exchange flows, whale alerts, stablecoin flows, MVRV/SOPR, token unlocks
11	Conviction Engine ★	Confluence checklist → score → grade → auto trade plan (the core product)
12	Alerts Engine	Structure / liquidity / zone / on-chain / NL alerts → desktop + push + email
13	Risk & Discipline	Position sizer, daily-loss lockout, correlation warnings, R:R gate
14	Trade Journal	Auto-screenshot, tagging, edge analytics, replay & review
15	Toolkit	Position size, pip, R:R, margin/liq, compounding, Kelly, session clock (built)
16	Economic Calendar	Events + countdowns + surprise index + AI impact notes

THE FLAGSHIP — YOUR EDGE

ICT / Smart Money Concepts toolkit

This is what makes TDX *not* just another charting app. Auto-detect and draw every concept below, each one a switchable layer that also feeds the Conviction Engine.

Market structure

- **BOS** (Break of Structure), **CHoCH** (Change of Character), **MSS** (Market Structure Shift)
- Auto swing high/low labelling; internal vs external structure
- Multi-timeframe structure: HTF bias drives LTF entry

Zones & imbalances

- Order Blocks (bullish/bearish), Breaker Blocks, Mitigation Blocks
- Fair Value Gaps (FVG) / imbalances, BPR (balanced price range), liquidity voids
- 'Unicorn' model: Breaker + FVG overlap

Liquidity — the heart of ICT

- Buy-side / sell-side liquidity (BSL/SSL) auto-marked
- Equal highs/lows (EQH/EQL), liquidity pools, trendline liquidity
- **Liquidity sweep / stop-hunt detection** (a flagship alert)
- Inducement, internal vs external liquidity, draw-on-liquidity targets

Premium / discount & time

- Auto dealing-range with 50% equilibrium; premium/discount shading
- OTE zone (Optimal Trade Entry, 0.62–0.79)
- Killzones (London / NY AM / NY PM / Asia), Silver Bullet windows, Judas Swing
- Power of 3 / AMD (Accumulation–Manipulation–Distribution) daily model

Cross-asset confirmation (rare — a real differentiator)

- **SMT Divergence** across correlated pairs (BTC/ETH, EURUSD/GBPUSD, ES/NQ)

Build discipline note

ICT/SMC definitions are partly subjective. Ship clean, defensible logic for a few concepts done right (structure + FVG + liquidity sweep) before chasing 30 sloppy ones. Quality of detection is the trust you're selling.

SUPPORTING ANALYSIS

Classic technical toolkit

- Multi-timeframe **confluence dashboard** — is every TF aligned, at a glance?
- **Volume Profile / VPVR** — POC, value area, HVN/LVN, naked POCs
- Auto support/resistance + **supply/demand zones**
- **Divergence scanner** (regular + hidden) on RSI / MACD / OBV
- Full **Fibonacci suite** — retracement, extension, projection, time fibs
- **Wyckoff** schematics (accumulation/distribution, springs, upthrusts)
- Pattern recognition — chart patterns (H&S, triangles, flags) + candlesticks

Indicator library — have vs. add

CATEGORY	BUILT ✓	ADD FOR PRO
Trend	SMA, EMA, WMA, Supertrend, Donchian	Ichimoku, Parabolic SAR, ADX/DMI, HMA, DEMA/TEMA, VWMA, Keltner
Momentum	RSI, MACD, Stochastic	CCI, Williams %R, Stoch RSI, MFI, Awesome/Ultimate Osc, ROC
Volume	VWAP, OBV	Volume Profile/VPVR, Anchored VWAP, CMF, A/D, Chaikin Osc
Volatility	Bollinger, ATR	Std Dev, Choppiness, Vortex, Historical Volatility
Pivots	Classic, Fib, Camarilla, Woodie	Auto-fib, session pivots
SMC layer	— (new module)	Order blocks, FVG, liquidity, BOS/CHoCH, premium/discount
Auto-detect	— (the AI flex)	Divergence, auto S/R, candlestick & chart patterns

SO CONVICTION ISN'T JUST LINES ON A CHART

Fundamental layer

Crypto / on-chain

- Exchange in/outflows, whale-transaction alerts, stablecoin supply
- MVRV, SOPR, NUPL, realised cap, active addresses
- Funding rate, Open Interest, long/short ratio, liquidation heatmap
- **Token unlocks / vesting calendar** — supply-shock events traders crave
- Narrative / sector-rotation tracker (AI, RWA, memes, L2s...)

Forex / macro

- Economic calendar + **surprise index** (actual vs forecast)
- **Central-bank rate-hike probabilities** & policy bias
- **COT positioning** (smart money vs retail)
- Interest-rate differentials / carry, bond yields, real yields, DXY
- Currency-strength meter (built) + risk-on/risk-off gauge

THE PRODUCT, IN ONE SCREEN

★ The Conviction Engine

For any symbol, the engine auto-runs a confluence checklist, weights each factor, and outputs a single score, a grade, and a ready trade plan. This screen is ‘take a trade with confidence’.

BTC/USDT — LONG setup		CONVICTION 82 / 100
		GRADE: A
- - - - -		
✓ HTF bias bullish — 4H BOS confirmed		+20
✓ Price in discount — below 50% equilibrium		+15
✓ Sell-side liquidity swept — stop-hunt below		+15
✓ Bullish FVG + Order Block confluence		+15
✓ NY killzone active		+10
✓ RSI bullish divergence		+10
✓ Funding negative — shorts pay longs		+7
X News risk — FOMC in 2h		-10
- - - - -		
PLAN entry 64,200 · stop 63,400 · TP 66,800 · R:R 3.2		

- Setup grading A+ / A / B / skip, with customizable factor weights (pros tune their own model)
- Auto trade plan: entry, stop, targets, R:R — position size pulled straight from the Toolkit calculators
- Pre-trade checklist gate the trader can't skip — discipline by design
- Every factor is explainable and clickable — it teaches, it doesn't dictate

CONVICTION BEYOND THE CHART

Alerts · Risk · Journal · AI

ALERTS ENGINE	RISK & DISCIPLINE
• BOS / CHoCH formed; liquidity sweep / stop-hunt • Price tapped Order Block / FVG / S&D zone • Killzone open; SMT divergence appeared • Whale move, exchange-outflow spike, funding flip • Breaking news / economic surprise • Natural-language AI alerts in plain English	• Position sizer + liquidation calc (built) • Max daily loss → lockout • Correlation risk warning (3 long USD pairs?) • Minimum R:R gate, risk-per-trade enforcement • Drawdown tracker + recovery math
JOURNAL & EDGE ANALYTICS	AI LAYER (trader-specific)
• Auto-screenshot every trade with context • Tag by setup / model / session / pair / emotion • Your edge: win-rate by setup, killzone, R:R • Replay mode for post-trade review	• Chart vision — mark up structure/OB/FVG/liquidity • Devil's advocate — stress-tests your bias • News-to-price translation • Trade-plan critique & 'are you forcing this?' check

WHAT POWERS THE INTELLIGENCE

AI & model strategy

A. Language AI — routed by cost

JOB	MODEL	WHY
Bulk: sentiment tags, news dedup, headline scoring	Claude Haiku 4.5 / Gemini Flash	Pennies at high volume
Main analyst chat, explain-this-move, briefs	Claude Sonnet 4.6	Best quality/cost reasoning
Deep weekly thesis, multi-asset reasoning	Claude Opus 4.8	Premium tier feature
Chart-vision (read a chart screenshot)	Claude Sonnet/Opus (vision)	Multimodal markup
Free fallback / cost control	Groq (Llama), Gemini free	Keep provider-fallback chain

B. Quant / ML models — analysis assistance, not prediction

- **FinBERT** — purpose-built financial-news sentiment (better than generic LLM for bulk tagging)
- **GARCH** — volatility forecasting (legit, widely accepted)
- **Hidden Markov Models / clustering** — market regime detection (trend vs chop vs volatile)
- **Anomaly detection** (isolation forest / z-score) — unusual volume, whale moves, vol spikes
- **Correlation & PCA** — what's driving the market today

Positioning & liability

Never market ‘AI predicts the price.’ Frame every model as *AI-assisted analysis* and the Conviction Score as a *decision aid*. Put a ‘not financial advice’ line on every analytical surface. This is both legally safer and what serious traders actually want.

MAKE THE BUSINESS REAL

Data licensing, pricing & build order

The \$200/mo reality — budget for data

'Free APIs only' works for a free tool. The moment you charge, most free tiers (CoinGecko, CryptoPanic, Finnhub, Twelve Data) become non-commercial, and TradingView free widgets aren't licensed for paid products. Budget \$500–2,000/mo in real data costs and license the TradingView Charting Library. At \$200/user you break even on data around 5–15 subscribers — then it's high margin.

Suggested pricing tiers

TIER	PRICE	FOR
Pro	\$49–79/mo	Serious retail — charts, screeners, alerts, basic AI
Elite (flagship)	\$149–199/mo	Full AI analyst, derivatives + on-chain, unlimited alerts, backtester, conviction engine
Desk / Team	\$499+/mo	Small funds / prop desks — multi-seat, API access

Lead the marketing with the wedge: Bloomberg is ~\$2,000/mo — TDX is \$200 and AI-native.

Build order — what makes the paywall worth it

#	PHASE	WHY FIRST
1	Charts + ICT/SMC auto-detection	Your identity — structure, OB, FVG, liquidity, premium/discount
2	Conviction Engine + auto trade plan	The thing nobody else has — the whole pitch
3	Alerts (sweeps, zone taps, killzones, NL)	Strongest 'I'll pay for this' feature
4	On-chain + derivatives + macro feeds	Feeds the score; crypto traders pay for this
5	Journal + edge analytics	Retention — their stats live here
6	AI chart-vision + second opinion	The wow layer; differentiator at the top tier

Two non-negotiables

1) Frame everything as conviction/confluence, never 'signals to copy' — legally safe and what pros want. 2) Nail clean ICT/SMC detection on a few concepts before breadth — detection quality is the trust you sell.
